(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

October 13, 1962

Well No. 1 is located 660 ft. from South line and 1980 ft. from E line of sec. 16

SE 1/4 Sec. 16 (1/4 Sec. and Sec. No.) 31 North (Twp.) 16 East (Range) N.M.P.M. (Meridian)

Verde Gallup (Field) San Juan (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 5734 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

It is intended to drill this well in the following manner:

Drill an 8 3/4" hole to the top of the Mancos shale (approx. 700') and run and cement 700' of 7" casing with 150 sacks of cement to shut off all water. Cement to be circulated to the surface.

A 6 1/2" hole will then be drilled with air to approximately 1922' or the top of the Gallup formation where 1922' of 4 1/2" casing will be run and cemented with 80 sacks of cement.

The expected Gallup pay zone will then be cored or drilled with air to an approximate depth of 2100' and the well completed open hole.

If found necessary, the well will be sand oil fractured with approximately 25,000 gallons of oil and 25,000 pounds of sand.

Completion procedure will be determined by conditions and/or fluid encountered.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
