January 18, 1963

Well No. **Mudge 18** is located **1610** ft. from **N** ~~xxxx~~ line and **1450** ft. from **E** ~~xxxx~~ line of sec. **15**
NE/4 Sec. 15 **31N** **11W** **N.M.P.M.**
Basin Dakota **San Juan** **New Mexico**

The elevation of the derrick floor above sea level is **6138** ft.

DETAILS OF WORK

State diameter and expected depths to objective sands, show sizes, weights, and lengths of proposed casings, indicate mudlogging, cementing points, and all other important proposed work.

It is intended to re-work this well in the following manner:

1. Pull tubing and run a cement bond log.
2. (A) If no bond is present, squeeze the Dakota formation and re-complete as a Dakota well.
(B) If good bond is present, abandon the Dakota formation and re-complete as a Mesa Verde well.
3. If this well is completed as a Mesa Verde well, the offsetting Neil #2 well will be plugged and abandoned.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
