## FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

Well has been marginal since completion. Propose to pull tubing and rods, perform a bradenhead squeeze with 200 sack cement and refrac, using double frac volume (1500 bbls., oil, no sand). Re-run tubing and rods and recomplete. There has been no evidence of water but the well was completed prior to testage requirements. The bradenhead squeeze should back up the casing cement job and keep the frac localized in the pay.
