DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The oil zone of this well was depleted with well producing no oil or gas. We deepened this well from 2379' to 2390' with no commercial quantities of oil or gas encountered. We plan to plug & abandon this well in the following manner:

1. Move in and rig up pulling unit.
2. Pull rods and tubing.
3. Spot 40 sack cement plug in open hole section 2374-2390'.
4. Cement surface with 5 sack cement plug in 10-3/4" OD casing.
5. 10 sack cement plug at surface in 7" OD casing and install 1" steel marker.
6. All intervals not cemented will be filled with heavy mud laden fluid.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
