Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

To increase production it is intended to workover and restimulate this well in the following manner:

Full tubing.

To sidetrack junk and debris left in the deviated open hole section by the original shot stimulation, it is planned to squeeze cement the open hole through a cement retainer set near the bottom of the 7 5/8" casing, using approximately 250 sacks of cement.

Then

Test the 7 5/8" casing for leaks, isolate and squeeze any leaks found. If leaks occur between 1250' and 2700' no other squeeze of the 7 5/8" annulus will be done. If there are no leaks, the 7 5/8" casing will be perforated at approximately 1300' and the 7 5/8" casing annulus block squeezed with a minimum of 100 sacks of cement. Sidetrack the original hole and drill through the Mesa Verde to approximately 5250'. Run a full string of 4 1/2" production casing and run cement to tie into the 7 5/8" casing shoe.

Selectively perforate and sand-water frac the Mesa Verde formation.

18. I hereby certify that the foregoing is true and correct

U. S. GEOLOGICAL SURVEY

Instructions

General: This form is designed for submitting proposals to perform certain well operations, and reports of such operations when completed, as indicated, on Federal and Indian lands pursuant to applicable Federal law and regulations, and, if approved or accepted by any State, on all lands in such State, pursuant to applicable State law and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local, area, or regional procedures and practices, either are shown below or will be issued by, or may be obtained from, the local Federal and/or State office.

Item 4: If there are no applicable State requirements, locations on Federal or Indian land should be described in accordance with Federal requirements. Consult local State or Federal office for specific instructions.

Item 17: Proposals to abandon a well and subsequent reports of abandonment should include such special information as is required by local Federal and/or State offices. In addition, such proposals and reports should include reasons for the abandonment; data on any former or present productive zones, or other zones with present significant fluid contents not sealed off by cement or otherwise; depths (top and bottom) and method of placement of cement plugs; mud or other material placed below, between and above plugs; amount, size, method of parting of any casing, liner or tubing pulled and the depth to top of any left in the hole; method of closing top of well; and date well site conditioned for final inspection looking to approval of the abandonment.
