Re: Many Rocks Gallup Unit #1, M-06-31N-16W
Many Rocks Gallup Unit #2, D-07-31N-16W

Dear Ms. Kuchera:

The referenced wells are scheduled for mechanical integrity tests in 1986. The tests on these wells will be conducted on April 28, 1986. A representative from your company should meet the NMOCD field representative at 9:00 A.M. at the Many Rocks Gallup Unit #1 on April 28. The bradenheads should be exposed prior to testing. It will be necessary to pressure test the casing-tubing annulus by subjecting it to 250 psi pressure, holding that pressure for 15 minutes, and monitoring any pressure drop during that time. These tests are necessary to bring the Many Rocks Gallup project into compliance with NMOCD Rule No. 707. If you do not conduct the tests without prior notification, your allowable will be canceled.

Yours truly,

Carolyn J. Taplin
Deputy Oil & Gas Inspector
