DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate muddling jobs, cementing points, and all other important proposed work)

On March 15, 1952:

The casing was perforated with two cone shots per foot from 2568' to 2610', and with four cone shots per foot from 2610' to 2640'. The well was tubed and attempts to produce are still being made.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
