## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

To set 175 feet of surface pipe and circulate cement to the surface.

To drill a well to test the Alamo Verde formation, expected to be encountered or completed at approximately 5,600 feet; to use rotary drilling equipment down to the casing point of the oil or gas string; then convert to gas circulation and drill the pay section.

To set either 5 - 1/2" or 7" oil or gas string with 300 sacks of cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
