Re: Packer Leakage Test on EPHG #13 Allison
SH Section 12-32N-7W (MD)

Dear Mr. Oberly:

Packer leakage test submitted on June 3, 1958 by El Paso's gas production engineering department indicates the possibility of communication between the two producing zones in the above well.

It was stated on this test that it was El Paso's intention on June 5, 1958 to clean out the liquid accumulation so that a more accurate test could be made. In the event the re-test still indicates communication you are hereby directed that remedial action shall be started within 10 days from the re-test date.

Yours very truly

Emery C. Arnold
Supervisor, District #3

*Re: Allison Unit Well #13 (M)
Section 12-32N-7W*

Dear Sir:

*The acreage dedicated to the subject well is not a standard
proration unit.*

*A non-standard unit must be obtained before production can be
approved by this office.*

*The approval for such unit is to be obtained from Mr. A. L.
Porter of the Santa Fe office.*

Yours very truly

*A. R. Kendrick
Engineer, District #3*
