The elevation of the derrick floor above sea level is 5533 ft. (RMS)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Spudded 12-1/4" hole on November 10, 1959 and drilled to 44'. Reduced hole to 7-7/8" at 44' and drilled to 216'. Runned hole from 7-7/8" to 12-1/4" to 216'. 8-5/8" casing was set at 216' with 140 sacks cement containing 2% calcium chloride. Cement circulated. After waiting on cement, casing and water shut off were tested with 400 psi for thirty minutes which held with no indication of pressure drop. Reduced hole to 7-7/8" at 216' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
