The elevation of the derrick floor above sea level is 5549 ft. (ADB)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

TD 3180'. 5-1/2" casing was set at 3180' with stage collar at 2867'. Cemented first stage with 60 sacks 6% gel cement with 2 lbs. medium Tuf Plug per sack. Tested casing with 3000 psi for 30 minutes which held with no indication of pressure drop. Opened parts of stage collar and circulated for 4 hours with no trace of cement. Cemented second with 300 sacks 6% gel cement with 2 lbs. Tuf Plug per sack. Received full returns on first stage and lost circulation half way through second stage displacement. Top cement 1575' by temperature survey. Drilled two stage tool to 3177'. Circulated hole clean. Tested casing with 3000 psi for 15 minutes, which held with no indication of pressure drop. Released rig on December 10, 1959.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
