DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total depth 1705'. Plugged back depth 1671'.

Perforated 4-1/2" casing from 1639' to 1658' with 4 jet shots per foot. Acidized perforations through 2" tubing with 200 gallons of mud acid. Installed pumping equipment and attempted to pump lead oil. Well pumped dry without recovering all of lead oil. Treated perforations with 100 barrels of lease crude oil. Well pumped dry before recovering all of oil used for treating. Sand-oil-fraced perforations with 20,000 gallons of crude oil and 20,000 of sand. Cleaned out sand to total depth and commenced pumping well to recover lead oil.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
