Abstracts of the 1997 Annual Meeting of the American Psychological Association

For example, the following table shows the results of a regression analysis of the relationship between the number of hours worked per week and the number of hours of overtime worked per week, based on data from a sample of 100 workers. The regression equation is $O = 0.15H - 0.005H^2$, where O is the number of hours of overtime worked per week and H is the number of hours worked per week. The coefficient of determination is $R^2 = 0.85$.

1. The first step is to identify the problem. In this case, the problem is that the company is not meeting its sales targets. The second step is to analyze the data. The third step is to develop a plan. The fourth step is to implement the plan. The fifth step is to evaluate the results.
