At this time, under the current waterflood operation, ARCO cannot economically operate the subject well. An ongoing study to determine the feasibility of CO2 flooding for the Horseshoe Gallup Field is underway, which may yield significant additional oil recovery (a CO2 Pilot Project is planned to begin later this year as part of the study to assess CO2 flooding potential). Implementation of a CO2 flood would require the workover of existing wells, and the drilling of new wells. For this reason, ARCO proposes that this well be maintained in the long term shut-in status so that the well-bore will be available, should it be needed as part of a future CO2 flood. This plan eliminates the economic waste of potentially usable wellbores, and promotes conservation.  DEFINE THE Production Supervisor  DATE 5/24/88  TITLE Production Supervisor  DATE 5/24/88		78
