Summary:

The subject well is a 1999 Lewis Shale payadd in 7" and 4-1/2" casing. This well was drilled in 1972 and was completed in the Point Lookout and Cliffhouse intervals. The Pt. Lookout interval was stimulated w/ approximately 56,000 lbs. total sand and 43,344 gal. total slickwater. The Cliffhouse interval was stimulated w/ approximately 40,000 lbs. total sand and 33,348 gal. total slickwater and placed on production. The subject well will capture the Lewis Shale interval and will be perforated and fracture stimulated in two (2) stages with 270 total tons of liquid CO₂ and 95,000 lbs. total 40/70 mesh sand. The new stimulation technique will test the viability of a liquid CO₂ and sand stimulation within the Lewis Shale interval. The well will then be cleaned-up, tubing landed in the Mesaverde and placed on production.

- Comply to all NMOCD, BLM and BR regulations. Conduct daily safety meetings for all personnel on location. Notify BR regulatory (Peggy Bradfield 326-9727) and the appropriate Regulatory Agency prior to pumping any cement job and after CBL is run. If an unplanned cement job is required, approval is required before the job can be pumped. If verbal approval is obtained, document the approval in Dims. Allow adequate notice prior to the pump time for the Agency to witness the cementing operation.
- Inspect location and wellhead and install rig anchors prior to rig move.
- Construct blow pit.
- **DURING CO₂ STIMULATION, ONLY AUTHORIZED PERSONNEL ARE ALLOWED ON LOCATION. ONLY CO₂ EXPERIENCED AND APPROVED STIMULATION PERSONNEL AND PUMP EQUIPMENT ARE ALLOWED ON LOCATION.**

1. MOL, hold safety meeting and RU completion rig. Insure all safety equipment is strategically located and functioning properly. NU relief lines to blow pit. Set one (1) 400 BBL frac tank and fill w/ 2% KCL. Blow well down and kill well w/ 2% KCL water as necessary. ND wellhead and NU 7-1/16" 3M BOP, stripping head and blooie line.
