Re: Kimbark Operating Company, Horton #1A, G-7-31N-11W

Dear Mr. Arbuckle:

The Form 9-330, Well Completion Log, for the subject well shows a packer set at 7272 feet without tubing to the surface.

To produce this well as a Mesaverde single completion will require a cement plug above the packer to separate the two sets of perforations.

To produce this well as a Dakota-Mesaverde dual completion will require tubing through the packer, a packer-leakage test and a multiple completion order.

To produce this well as a down-hole commingled well will require an order to authorize the down-hole commingling after notice and hearing.

The selection of direction is up to the Kimbark Operating Company. I cannot assure you of approval of down-hole commingling after the hearing.

If there are questions, please contact us.

Yours very truly,

A. R. Kendrick
Supervisor, District #3
