17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

The above captioned well had a very thin oil section at the very top of the Dakota sand. Attempt to complete as a commercial oil well was unsuccessful due to excessive amounts of water. Reasonable effort has been made to produce gas or oil in economic fashion without success; therefore it is proposed to plug and abandon the above captioned well in the following manner:

- 1). A 100' (8 sx-9.44 Cu.Ft. Cl."B" Cement) plug set in 4½" Csg. from 2380' to 2280' to cover perfs., approx. 50' above and 50' below top of Dakota.
- 2). Shoot & pull 4½" csg. from approx. 1550' and place a 100' cement plug across the stub, 50' in 4½" csg. & 50' in open hole. Note 6½" deameter of open hole above 1550'; therefore (14 sx-16 Cu.Ft. Cl."B" Cement) plug from 1600' up to 1500', or similar plug at the lowest point at which 4½" csg. can be pulled from.
- 3). Note: Well was air drilled thru the Gallup zone and no gas, oil or water was encountered. Density log indicated very low porosity here.
- 4). A 100' (20 sx-23.6 Cu.Ft. Cl."B" Cement) plug set across base of 7" surf. csg. 50' in & 50' below, from 609' up to 509'.
- 5). Set 50' (10 sx-11.8 Cu.Ft. Cl."B" Cement) plug at top of surf & install prescribed marker. *Weld ½" steel plate across 7"*
- 6). All plugs are to be pumpplaced thru tubing with gel mud between plugs. Location to be re-habilitated, graded and seeded as prescribed. *9.5# / gal on heavier fresh*
- 7). Work to commence by Dec. 1, 1983 or earliest rig availability. (OVER)

18. I hereby certify that the foregoing is true and correct

Instructions

General: This form is designed for submitting proposals to perform certain well operations, and reports of such operations when completed, as indicated, on Federal and Indian lands pursuant to applicable Federal law and regulations, and, if approved or accepted by any State, on all lands in such State, pursuant to applicable State law and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local, area, or regional procedures, and practices, either are shown below or will be issued by, or may be obtained from, the local Federal and/or State office.

Item 4: If there are no applicable State requirements, locations on Federal or Indian land should be described in accordance with Federal requirements. Consult local State or Federal office for specific instructions.

Item 17: Proposals to abandon a well and subsequent reports of abandonment should include such special information as is required by local Federal and/or State offices. In addition, such proposals and reports should include reasons for the abandonment; data on any former or present productive zones, or other zones with present significant fluid contents not sealed off by cement or otherwise; depths (top and bottom) and method of placement of cement plugs; mud or other material placed below, between and above plugs; amount, size, method of parting of any casing, liner or tubing pulled and the depth to top of any left in the hole; method of closing top of well; and date well site conditioned for final inspection looking to approval of the abandonment.

7" 20# Surf. Csg. set at 559' in 9 7/8" hole with 170 sx. cir. to surf.
 4 1/2" 10.5# Csg. set at 2400' T.D. in 6 1/4" hole (Air drilled from under surface to appx. 2341', then mud drilled to T.D.), cemented with 95 sx. 50-50-Poz. Csg. perfs. 2331-2343.
