17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

Completion operations commenced on 11-17-82. Total depth of the well is 2878' and completed open hole. The open hole interval from 2840' to 2878' was reamed out to 11 inches and then was gravel packed. Pengo tools were run as part of the 7" casing. The tools are set from 2615' to 2655'. The design of the Pengo tools allow the casing to be cemented in place and still provide an uncemented horizon (2615' to 2655'). The Pengo tools consist of a top and bottom external inflatable casing packer which isolate the horizon, perforated sliding sleeve tools, and perforated screened sliding sleeve tools. The perforated tools provide access to the horizon and the sliding sleeve when open, allows production and when closed, isolates the horizon from the tubing/casing annulus. The sliding sleeves are opened and closed by using a mechanical shifting tool. The uncemented horizon annulus was gravel packed. After testing the Pengo tool horizon, the sliding sleeves were all closed and is presently not producing. Ran 2-7/8" tubing with a downhole pump to 2745'. Released rig on 12-15-82. Presently producing from the open hole interval from 2840' to 2878'.
