RE: C-104'S

The following wells which are listed as needing C104's on your attached correspondence are either non productive or plugged. There will never be any transporting of oil or gas from these wells.

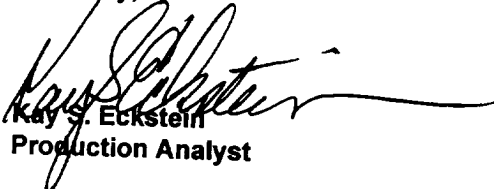

CAIN 2 (PC) This formation has never produced. A Bridge Plug has been put in place. ^{2A} H-25-31-13
HURON 4 (DK) This zone is plugged. 3-11-83 p-2-26-4

The LANGENDORF 3 is a Water Disposal well and neither gas nor oil is transported from this location.

I am sending along with this correspondence the required C104's on the Clayton wells Candado 1 (MV), Alberding 1 (MV) and Jicarilla "H" Lease wells which were overlooked.

Thank you.

Sincerely,

Kay S. Eckstein
Production Analyst
