(iv) Once the response is completed, operators clear the all pertinent data, and give pertinent data to all markers and zones of the

Production on this well has dropped significantly. There is at present Bit Sub, and a 14" bit that was left stuck in open hole @ 3414'-5

We plan on clearing out well trying to get any junk that was left in hole with an Air Gun. If we cannot get all the hole we will determine at that time if we will use whipstock in the hole to get out the junk. If we cannot get it out with Air Gun we will need to construct a water seal (4" x 4" x 50' long) and seal it with at least 8 mil plastic and a blow pit (lined so as to flare gas/drainage) to fill it with water. We will then pump water into the well until closure of pits. After clean out is completed and all fluids removed from well we will seal the well with cement within the plastic by folding in sides to cover coal fines and bury the well. We will then backfill the well with cement to B.M. specs. All Proposed work will be done on existing disturbed well.

We also plan on running a 1" #5 1/2" liner through open hole with a new seal bit and set at approximately 30'6" K.B. 5 1/2" liner will be pre drilled, tapered at bottom and drillable plugs. We plan on lowering tubing into 5 1/2" liner to help in cementing.

Proposed work is planned to begin March 1, 1995, after approval of the work plan.

14. I hereby certify that the foregoing is true and correct.
