The elevation of the ~~derrick floor~~ ^{ground} above sea level is **5983** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Texas National Petroleum Co., proposes to drill a 6000' Mancos test with rotary tools at the above described location. 175 feet of 10-3/4" surface casing will be set and cemented to the surface. A 9" hole will be drilled with water and mud to 3600 feet (through the Mesaverde) and 7" casing set and cemented. A 6-1/4" hole will be drilled with gas to 6000 feet to test the Tootie section. If the well is productive, a 5" liner will be run in a 6-1/4" hole. If test is not productive, it will be abandoned in accordance with instructions from the District Engineer of the United States Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
