DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was plugged and abandoned on August 3, 1959. We now propose to drill out cement and clean out well to 1200'. We will then perforate 5" OD casing from 1156' to 1160' and run 2-1/2" tubing to 1156' with Baker Model "D" Production on bottom. Acidize through new 5" OD casing perfor. 1156-1160' with approx. 1000 gals. 15% Reg. Acid and fracture with approx. 15,000 gals. water and 15,000# sand.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
