DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a water well with rotary rig to estimated depth of 2500' to supply water for a drilling rig. To set a 1 1/2" cas. @ 97' with cement circulated. To set 3/4" cas. to total depth and circulate cement to surface, and perforate in water sand. If it is a dry hole, we will plug and abandon in compliance with U.S.G.S. and State regulations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
