Well No. 7 Navajo is located 2310 ft. from $\begin{matrix} N \\ \times \end{matrix}$ line and 330 ft. from $\begin{matrix} E \\ \times \end{matrix}$ line of sec. 24
NW/4 Sec. 24 32 N 18 W NMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Undesignated San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5569 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Set approximately 30 feet of 7"23# surface casing with six sacks cement. Pilot drill ahead to 200 feet with 6-1/4" bit to see if air drilling possible. Drill with either air or drilling mud to test Tocito sandstone at about 1420 feet, total depth 1500 feet, run electric log, run 4-1/2" production string or plug and abandon based on results of core or electric log analysis.

If 4-1/2" production string is run, will cement with 50 sacks.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
