Re: Aztec Oil & Gas Company
Hubbard #3
A-15-32N-12W

Dear Joe:

Please verify my plot of the Mesaverde pressures on the back of the original copy of the packer-leakage test for the subject well.

The Mesaverde pressure of 896 psi measured June 19, 1967, indicates that a problem may exist. If the pressure was measured as 896 psi, please cause the well to be retested.

The test report is returned herewith.

Yours very truly,

A. R. Kendrick
Engineer, District #3

Re: Aztec Oil & Gas Company
Subsidiary of
P.O. Box 1000

Dear Sir:

The first step in the process of the oil and gas industry is the discovery of the oil and gas. This is a process which is carried out by the oil and gas industry.

The first step in the process of the oil and gas industry is the discovery of the oil and gas. This is a process which is carried out by the oil and gas industry.

The first step in the process of the oil and gas industry is the discovery of the oil and gas. This is a process which is carried out by the oil and gas industry.
