## NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

- 1. A pacine feelings not shall be commenced on each multiply completed well within seven days after except that the provincesty produces some shall remain abus in while the some while actual completion of the well, and animally thereafter as prescribed by the order authorizing the actinal completions of the week, and attending necessarily in present the system of the week and a making completions within several days following recommissions analogy chamical or fixed over transpare, and whenever remarked work has been done on a well during which the pacter or the tabing have been disturbed. Tests shall also be taken at
- any time that communication is suspected or when requested by the Division.

  2. At least 72 hours prior to the communement of any packer lealings test, the operator shall study the Division in writing of the exact time the test is to be communed. Offset operators shall also be so antified.
- 3. The pacine lesings and shall commune when both some of the dual completion are shall in for processes assistingation. Both access whall require when in well the well-band pressure in each has stabilized, provided bowever, that they need not remain when in more than seven days.
- 4. For flow Test No. 1, one some of the dust completion shall be preduced at the normal state of production while the other some remains also in. Such test shall be continued for seven days if the case of a gas well and for 24 hours in the case of an eil well. Note: if, on an initial packer ionizage test, a gas well is being flowed to the assemptions due to the lack of a pipeline commercion the flow period shall be deres hours.
- 5. Following completion of flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
- 6. Flow Test No. 2 shall be conducted even though no leak was indicated during flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1

- was proviously shan-in is produced.
- 7. Pressures for gas-some taxes smart be measured on each some with a dear presents gauge at time inservals as follows: 3 hours tests: immediately prior to the  $\epsilon$ beginning of each flow-period, at fifteen minus inservals during the first hour met, and at hourly inservals shounder, including one pressure measurement distrily pring to the flow period, at least one time during each flow period (at  $\epsilon_{\rm c}$ primarely the emission prime) and immediately prior to the conclusion of each. flow period. Other pressures may be minn as desired, or may be requested on welle which have proviously shown questionable test data.
- 24-hour oil main trout; all pressures, throughout the entire test, shall be resoly magazined and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each met, with a denderight pressure gauge. If a well is a gas-oil or an oil-gas dual ion, the recording gauge shall be required on the oil zone only, with
- Residually pressures as required above being taken on the gaz zone.

  8. The results of the above described tests shall be filed in triplicate within 15 days. after completion of the test. Tests shall be filed with the Aznec District Office of the New Mexico Oll Conservacion Division of Northwest New Mexico Packer Leakage Test form Revised 10/01/78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
