

DEVELOPMENT PLAN FOR SURFACE USE
MOUNTAIN UTE GAS COM "G" NO. 1

Amoco Production Company proposes to drill the subject well with rotary tools on a graded location as shown on the attachments. The location is in accord with NMOCC regulations. A road already exists to the location as the proposed well is a twin to an existing well which produces from a lower horizon. Therefore, no additional road construction will be required.

No airstrips or field camps are nearby and none will be built. Vegetation in the immediate area of the well location is sparse. Water for drilling operations will be obtained from the La Plata River and hauled to the location. Upon completion of the well the location will be cleaned and the reserve pit will be backfilled.
