NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

Operator AMOCO PRODUCTION COMPANY

Lease STANOLIND GAS COMB E

Well No. 1

Location of Well: Unit 1 Sec. 9 Twp. 32

Rge. 12

County SAN JUAN

	NAME OF RESERVOIR OR POOL	TYPE OF PROD. (Oil or Gas)	METHOD OF PROD. (Flow or Art. LIII)	PROD. MEDIUM (Tbg. or Cog.)
Upper Completion	MESAVERDE	GAS	FLOW	TBG
Lower Completion	GALLUP	OIL	FLOW	TBG

PRE-FLOW SHUT-IN PRESSURE DATA

Upper Completion:	Hour, date shut-in <u>6-26-88</u>	Length of time shut-in <u>5 days</u>	SI press. psig <u>610</u>	Stabilized? (Yes or No) <u>yes</u>
Lower Completion	Hour, date shut-in <u>6-26-88</u>	Length of time shut-in <u>3 days</u>	SI press. psig <u>500</u>	Stabilized? (Yes or No) <u>yes</u>

FLOW TEST NO. 1

Commenced at (hour, date)* <u>6-29-88</u>		TIME (hour, date)		LAPSED TIME SINCE*	MV PRESSURE GAL.	PROD. ZONE TEMP.	Zone producing (Upper or Lower): <u>Lower</u>	REMARKS
		Upper Completion	Lower Completion					
6/29/88	Day 1	610	610	500	T			Both zones SI
6/29/88	Day 2	610	610	500				Both zones SI
6/29/88	Day 3	610	CAS	509/TUB				Both zones SI
6/29/88	Day 4	610	610	500/TUB				Both zones SI
6/30/88	Day 5	610	610	340/TUB				Lower zone Flow.
7/1/88	Day 6	610	610	330/TUB				Lower zone Flow

Production rate during test

Oil: _____ BOPD based on _____ Bbls. in _____ Hours. _____ Grav. _____ GOR _____

Gas: _____ MCFPD; Tested thru (Orifice or Meter): _____

MID-TEST SHUT-IN PRESSURE DATA

Upper Completion:	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
Lower Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)

By Charles Sholes Date 8/19/88

Title DEPUTY OIL & GAS INSPECTOR, DIST. #3 Date 5-1-77

NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. A packer leakage test shall be commenced on each multiply completed well within seven days after initial completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when required by the Division.
 2. At least 24 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.
 3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilisation. Both zones shall remain shut-in until the well-head pressure in each has stabilised, provided however, that they need not remain shut-in more than seven days.
 4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be three hours.
 5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
 6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1, unless otherwise directed by the Division. Flow Test No. 1 except

that the previously produced zone shall remain shut-in, and no leak is indicated during Flow Test No. 2, the well may be left shut-in.

 7. Pressures for gas-zone tests must be measured on each zone with a dead-weight pressure gauge at time intervals as follows: 1 hour tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals during the first hour thereof, a hourly intervals thereafter, including one pressure measurement immediately prior to conclusion of each flow period. 2-day tests: immediately prior to the beginning of flow period, at least one time during each flow period (at approximately the midpoint) and immediately prior to the conclusion of each flow period. Other pressure measurements may be required on wells which have previously shown unusual test data.
 8. 24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must checked at least twice, once at the beginning and once at the end of each test. Dead-weight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the dead-weight pressure gauge shall be required on the oil zone only, with dead-weight pressure at the above being taken on the gas zone.
 9. The results of the above-detailed tests shall be filed in triplicate within 15 days of completion of the test. Tests shall be filed with the Assistant Office of the New Mexico Oil Conservation Division or Northern New Mexico Packer Leakage Test Form 1-10-01-78 with all dead-weight pressures indicated therein as well as the temperatures (gas zones only) and gravity and GOR (oil zones only).
