Well No. 1 is located 1980 ft. from S line and 1980 ft. from E line of sec. 12
NE 1/4 Section 12 24N 10W NMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Alford San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft. To be furnished later

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The Pictured Cliffs sandstone is the objective formation which should be found at approximately 2,100'. Approximately 110' of 8-5/8" surface casing will be cemented and circulated. An 8-3/4" hole will be drilled to a point just above the top of the Pictured Cliffs sandstone where the hole will be reduced to 4-3/4", and the well drilled through the sandstone. A Schlumberger survey will be run, and if production is indicated 72 or 8-1/2" casing on a packer will be run for a production test.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
