The elevation of the derrick floor above sea level is 6617 ft. (G.L.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well was drilled to total depth of 2121 feet with rotary tools. 10-3/4" casing was set at 103 feet as previously reported. No oil string casing has been run. No oil or gas shows were encountered in the Pictured Cliffs formation by drill stem tests. A Schlumberger electric survey indicated possibility of gas and/or oil production in the Ojo Alamo formation from 1280 - 1290 feet. It is now proposed to spot a 100-sack cement plug in hole with top at 1280 feet and drill stem test from 1280 to 1060 feet in order to test Ojo Alamo formation. If this test indicates no production of gas or oil in the formation, notice of intention to plug and abandon well will be filed.

ILLEGIBLE

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
