E. H. Pipkin

Farminston, New Mexico March 3, 1960

Well No. 2 is located 990 ft. from N line and 1045 ft. from E line of sec. 35

35 (Sec. and Sec. No.) T-28N (Twp.) R-11E (Range) 112°24' (Meridian)

Fulcher Knts. - Pictured Cliffs (Field) San Juan (County or Subdivision)

New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 5662 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Due to a lack of commercial gas production possibilities we propose to permanently plug and abandon E. H. Pipkin Well No. 2 as follows:

1. Spot 25 sacks cement plug on bottom (approximately 20-40 feet of cement fill-up inside casing) and squeeze with minimum pressure to leave open hole section filled with cement. Fill-up into base of 5-1/2" casing.
2. Fill hole with fluid (water).
3. Pump 25 sacks cement down 5-1/2" - 8-5/8" annulus to anchor plug.
4. Remove well head and surface equipment.
5. Spot 5 sacks cement for surface plug (0-40') and erect dry hole marker.
6. Plug and abandonment operations by above procedure to permit possible future re-entry in the event other zones are discovered to be productive in the area.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
