The elevation of the derrick floor above sea level is 6345 ft. (CL)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

After setting 13-3/8 inch casing, drilled 12-1/4 inch hole to 753 feet. On bit trip, failed to get below 332 feet. Ran Caliper survey which indicated 13-3/8 inch casing had parted at 274 feet and dropped down hole 26 feet. Went in lower joint of casing 24 feet and found casing had collapsed. As a result of the above, we propose to plug and abandon Rosa Unit 35-5 as follows:

1. Spot 200 sacks of cement plug in base of surface pipe.
2. Spot 10 sacks of cement plug in top of surface casing and weld on cap.
3. Request special waiver to weld cap on 13-3/8 inch casing, instead of erecting 4 inch marker due to plans to respad well 15 feet due south as Rosa Unit 35-5X.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
