RECEIVED

By OCD District 1 at 1:32 pm, Apr 30, 2015

Describe Cause of Problem and Remedial Action Taken.*
There was a power failure at the Wattam Federal #6 disposal system. The centrifugal pump failed to come on and transfer the produced water to the salt Water Disposal well. This resulted in the water tanks running over and allowing some skim oil to run over the tanks. Some of the firewall material Was rolled on top of the spill to prevent livestock and wildlife from getting into the oil.

Describe Area Affected and Cleanup Action Taken.*
100' by 30' spill within the Firewall. All the oil was contained within the firewall. Plan to remove oil contaminated soil to a New Mexico registered Land Farm facility.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
