Dear Mr. Larson:

The delineation workplan for 1RP-4665 requires additional vertical delineation. Due to the depth to groundwater, the permissible chloride level is 250 mg/kg obtained and maintained for 10 ft. further.

NMOCD requests additional vertical delineation at SB1, SB3, and SB4. For SB7, were field chloride tests completed or soil samples collected and saved at 10 ft., 20 ft. or 25 ft. bgs? If yes, please include in order to assess whether 10 ft. of permissible chloride levels are present.

Thanks,

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.
