Mr. Johnston:

NMOCD approves of the delineation and proposed remediation plan for 1RP-962 with these modifications:

- Due to the depth of groundwater and that there is a water well within 1000 ft. of the release area, permissible levels of TPH is 100 mg/kg, not 1000 mg/kg.
- Laboratory analyses of confirmatory sidewall samples must be ≤ 10 mg/kg Benzene, 50 mg/kg BTEX, 100 mg/kg TPH, and 600 mg/kg chlorides. Sidewall samples should ≤ 50 ft. apart.
- What is the equipment used to obtain samples to 34 ft. bgs for SP2? If a soil borer was utilized, please submit soil bore logs.
- Please include a scaled map with the confirmation sample locations demarcated with GPS coordinates, area with liner outlined, and excavation depth annotated in the remediation report.

Please confirm or inform if clarification is requested. Like approval from NMSLO is required.

Thanks,

Olivia Yu
Environmental Specialist
NMOCD, District I
Olivia.yu@state.nm.us
575-393-6161 x113

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.
