Subject: RE: Work plan for 1RP-4868, Devon Energy Transfer line from Ursula Frac Pond to

Mr. Middleton:

NMOCD will consider delineation complete and approve of the proposed remediation plan for 1RP-4868 with these conditions:

1. To complete vertical delineation, NMOCD requires at least 2 depths demonstrating permissible levels. For Site 1, laboratory analysis for chlorides at 7 ft. bgs and for Site 3, a sample at 2 ft. bgs.
2. On an appropriately scaled map, annotate the dimensions and depths of excavation for each area.
3. In a table, provide GPS coordinates and depths of confirmatory sidewall and bottom sample

locations.

4. Photo documentation of delineation and remediation activities.

Please confirm or inform for clarification. The initial C-141 stated that the impacted areas occurred on State surface. Therefore, like approval from NMSLO required. NMSLO may have additional stipulations. Mark Naranjo will be the correspondent in the interim.

Thanks,

Olivia Yu
Environmental Specialist
NMOCD, District I

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.
