

Pure State #1

In regards to the Pure State #1 produced water (SWD) transfer flow line release, located in unit letter-O (SW¼ of the SW¼) section 36 T19S R34E and Latitude: 32° 36.572'N Longitude: 103° 30.749'W. CEHMM recommends that all contaminated soil be removed and disposed of in accordance with OCD regulations. Once all contaminated soil has been removed in accordance with OCD standards, we recommend that the excavated area be filled in with clean soil with the same physical properties of that which was removed, and the area re-contoured to match the immediate proximal landscape. On either side of any excavation the walls must be sloped no more than 30 degrees to ensure that any fauna that may fall into the excavated area has the ability to escape. The entire disturbed area should be reseeded with an approved native vegetation seed mix after all excavation and re-contouring has been completed.
