Subject: RE: Sheridan Production- Carter Lease well number 1 Battery (RP- 4990)
Date: Monday, April 30, 2018 1:57:00 PM

Mr. Alves:

Please address the following concerns regarding the delineation report for 1RP-4990:

- Please be advised that the proposal to complete delineation for SP1 at time of excavation is considered conducted at risk. Delineation must be completed before addressal of remediation.
- Please remember to mark the release point in relation to delineation sample locations.
- Are there data from field tests between surface and 3 ft. bgs? If the proposed excavation depth is 1 ft. bgs, then the base of the excavation must demonstrate permissible levels of BTEX, TPH extended, and chlorides.
- If any portion of the impacted release area is not remediated, based on practicability, feasibility, and/or safety reasons, then 1RP-4990 would be considered for deferral rather than closure.
- Laboratory analyses of confirmation sidewalls will be required.

Thanks,
Olivia

Ms. Yu,

Here is the proposed remediation work plan for the above referenced location, please feel free to call or email to discuss or if you have any questions. As always I look forward to hearing your suggestions and recommendations and hope that this remediation plan meets your expectations. Thank you in advance.
