Jerri,  
Go ahead with the initial removal and we will review the testing as progress is attained. Do prep a plan for full delineation and placement of groundwater well for approval.  
Larry

Bob believes the reason for the labs being low were due to the age of the releases. We would like to install a monitor well after remediation of the spill area.

Yes - I am confused that the chlorides spilled were 55k and no samples were anywhere close to that - additionally, what is the thought of drilling a monitor well in the area?
