Dear Ms. Gram:

NMOCD will approve of the proposed delineation plan for 1RP-4732 and 1RP-4738. Permissible levels of chloride of 600 mg/kg is granted for vertical and horizontal delineation. Still, as mentioned in the email dated September 1, 2017, at least two depths must have laboratory analyses for each sample location: depth obtained and depth maintained (minimal 5 ft. deeper for chlorides and 2 ft. for BTEX and TPH).

Please confirm or inform for further clarification.

Thanks,
Olivia
