Dear Ms. Baker:

Please be advised that conducting delineation, while excavating (remediation), is considered conducted at risk. NMOCD recommends that the release be characterized, vertically and horizontally, before proposing a remedial activity.

However, NMOCD will approve of the proposed delineation plan for 1RP-5019 with these stipulations:

- Laboratory analyses of confirmation sidewall and bottom samples are required at no greater than 50 ft. apart, regardless of the depth of excavation.
- Laboratory analyses of representative surface samples in the overspray area.
- Sidewalls for delineation/remediation must represent the lateral extent of the impacted area as outlined in Figure 2.
- Provide GPS coordinates for the proposed sample locations on a scaled map or tabulated.
- Delineation/remediation samples must demonstrate permissible levels of BTEX, TPH, and chlorides. Laboratory analyses must have accompanying data from field tests, from depths of samples not submitted for laboratory analyses to complete release characterization. Provide data at 1 ft. intervals.
- Dated photo documentation of the delineation/remediation activities.

Please confirm or inform for further clarifications. BLM may have additional concerns/conditions.

Thanks,
Olivia

Subject: EK BS2 Federal Com 1H Proposed Work Plan /1RP-5019

Hello all,

On behalf of McElvain Energy Inc., I have attached a proposed work plan for the EK 30 BS2 Federal Com 1H/1RP-5019 for your review.

Thank you

Adrian Baker
