Attachments: approved_Antelope Characterization 1RP-4896 1RP-4925 May 2018_.pdf

Good morning Mr. Parker:

Notes

- NMOCD database indicates the release occurred on Fee surface and mineral ownerships. NMSLO can verify.
- The information provided regarding the proposed rule change is acknowledged, but is not current regulation.

NMOCD will agree that delineation is completed for 1RP-4896 and 1RP-4925. For the proposed remediation plan, based on the provided delineation data and the depth to groundwater estimated at approximately 50 ft. bgs:

- Up to 4 ft. excavation for the areas represented by SB Central, SB East, and SB West.
- Up to 2 ft. excavation for the areas represented by SB North and SB South.
- Bottom and sidewall confirmation samples are required for each of the two excavation depths. At least one of the sidewalls must be between the differing excavation sections.
- Confirmation samples must be tested for BTEX, TPH extended, and chlorides.
- Provide a scaled map with the excavated areas outlined and actual excavation depth annotated. Confirmation sample locations must be marked by GPS coordinates or provided in a tabulated format.

Thanks,
Olivia

Ms. Yu:

R.T. Hicks Consultants submits the attached characterization and remediation plan for 1RP-4896 & 1RP-4925, commonly known as Purvis Operating Antelope #001.

We look forward to division approval so we can begin restoration activities. Please contact me with any questions or comments.
