---

Mr. Lowry:

Please note that the Ironhouse Draw, which is a NMOSE-identified watercourse, is within 1000 ft. of the release area. The current RRALs are adjusted accordingly to 20.

NMOCD will approve of the preliminary delineation completed for 1RP-4944 and the proposed remediation plan with one condition. Please ensure that all confirmation sidewall and bottom samples are within permissible levels as also required by NMSLO. Provide dated photo documentation and mark confirmation samples locations with GPS coordinates on a scaled map.

Thanks,  
Olivia

**Subject:** RE: 1RP-4944 - Albatross State Com #002H - Initial Investigation Summary and Proposed Remediation Strategy

Good morning all,

NMSLO accepts this report as written and approves of the proposed remediation action with the following changes:

- Excavation should be advanced to encompass sample points E, S, and W as they displayed high chloride levels. This may be the proposed remediation action laid out in the plan, but I wanted to ensure.
- As stated in the report; confirmation sample from base and sidewalls and also areas where excavation depths change

Approval is also required from NMOCD.

**Subject:** 1RP-4944 - Albatross State Com #002H - Initial Investigation Summary and Proposed Remediation Strategy

Please find attached the *Initial Soil Investigation Summary and Proposed Remediation Strategy* that has been prepared for COG's Albatross State Com #002H Release Site. The Release Site is located in Unit Letter "B", Section 30, Township 18 South, Range 35 East is Lea County, New Mexico. If you have any questions or need any additional information, please feel free to contact Becky Haskell or myself by phone or email. Thanks

Respectfully,

**Joel Lowry**
