The **BLM acceptance/approval does not** relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment or if the location fails to reclaim properly. **In such an event a site does not achieve successful restoration, or future issues with contaminants are encountered, the operator will be asked to address these issues until they are fully mitigated and the location is successfully reclaimed.** In addition, BLM approval does not relieve the operator of responsibility for compliance with any other federal, state or local laws/regulations.

Good morning Mr. Baker:

Please note soil temperatures for samples collected on May 7, 2018, are not within standard sampling ranges, particularly for samples to be tested for BTEX and TPH.

NMOCD approves of the delineation completed for 1RP-5006 and the proposed remediation with these clarifications:

1. There is a wide disparity between field and laboratory chloride levels. Bottom and

sidewall confirmation samples must demonstrate ≤ 600 mg/kg chlorides. If not, proceed to the next foot and a minimal 20 mil liner must be emplaced, if excavation proceeds pass 4 ft. bgs (e.g., area represented by SP1).

2. Each different depth of excavation must have separate sidewall/edge and bottom confirmation samples at no greater than 50 ft. apart. Demarcate and annotate each excavation area and depth on a scaled map.
3. Area represented by SP7 does not require a 4 ft. excavation. Based on delineation data, 2 ft. removal would be sufficient, contingent upon confirmation samples.
4. Provide dated photo documentation of the delineation and remediation.

Like approval from BLM required. BLM may have additional concerns or stipulations.

Thanks,

Olivia
