Date: Friday, June 29, 2018 2:52:00 PM

Mr. Parker:

Thank you for the reminder regarding the delineation workplan for 1RP-4778. Please be advised that NMOCD database indicates the Western portion of the release on the lease road impacts Federal surface. BLM can verify.

In review of the submitted data in the report dated , further vertical delineation will be required. In particular, the areas represented by Pad West, Trench 1, Trench 2, and HA-250 South would need chloride data at greater depth than 13 ft. bgs. Please explain the disparity in chloride levels in samples from Pad West at 7 ft. and Pad West at 7 ft. Caliche. Was the caliche sample from scraping the caliche layer (i.e., not an intact, discrete soil sample)?

Thanks,
Olivia

Ms. Yu:

Per my email for Advance Energy - 1RP-4953, we plan performing additional delineation for 1RP-4953. We believe the Tomahawk location has been properly delineated. If NMOCD believes additional delineation is necessary we would like to conduct the characterizations at the same time as 1RP-4953. We look forward to NMOCD's response on whether additional delineation at the Tomahawk site is necessary.

Thank you.

Hello Olivia,

As for RT Hicks proposed plan, Merchant Livestock would like to communicate to NMOCD that we do not agree or approve of this proposal. Thank you for your help.
