Ms. Haskell:

The 50 ft. interval is for a representative sample of the impacted area. For 1RP-4695, some flexibility is permitted. Based on the provided Google image, the edge of the release area not in the pasture can be adjusted to a greater interval spacing (i.e., SW edge for the area represented by T-2 on the lease road can be represented by 1 confirmation sample). Is this agreeable?

Olivia

Ms. Yu,

Why have you decided on sampling ≤ 50 ft. apart? You request this for every site, no matter the size of the spill. On larger spills can you not consider allowing for a larger spacing and working with us?

Thank You,

Becky Haskell

**** External email. Use caution. ****

Dear Mr. Neel:

NMOCD approves of the delineation completed for 1RP-4695. Please see the attachment for your records.

The proposed remediation plan is also approved with these stipulations:

1. For the area represented by T1, confirmation samples of the 4 sidewalls and bottoms of the proposed 3 ft. excavation.
2. For the area represented by T2, confirmation samples at the edges of the proposed 6 inch excavation, at the borders with T1 and T3/T5 areas, and at the bottom of the 6" removal. Sample locations must be <= 50 ft. apart.
3. If permissible levels for TPH and BTEX are exceeded in the bottom samples, proceed to excavate to the next foot.
4. A scaled map with the confirmation sample locations marked and depth of excavation annotated.

Please confirm or inform if clarification is necessary. Like approval from NMSLO is required.

Thanks,

Olivia Yu

Environmental Specialist

NMOCD, District I

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.
