13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

In order to bring cement to surface on the 5-1/2" production casing string per the plan approved by Long Vo on 10/8/2020, EOG requests to pump a three stage cement job on the 5-1/2" production casing string with the first stage (1,420 sx Class C 14.5 ppg) being pumped conventionally with the calculated top of cement at the encountered loss zone (~7,640') and the second stage (2,000 sx Class C 14.8 ppg) performed as a bradenhead squeeze with planned cement from the encountered loss zone to surface. A prepared top out consisting of 1,000 sacks of Class C cement (14.8 ppg) will follow until cement circulates. The final cement top will be verified by Echo-meter.

EOG will include the Echo-meter verified fluid top and the volume of displacement fluid above the cement slurry in the annulus in all relevant post-drill sundries.

EOG will report to the BLM the volume of fluid (limited to 5 bbls) used to flush casing valves
