17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

This well is currently at its economic limit due to operating cost and salt water disposal cost.

It is proposed: To set a retainer in the casing just above the packer shoe @ 12,960' and squeeze the OH section 12,960' - 13,003' with 150 sks. Class "H" Cement. Perforate 12938 to 12,949 W 2 JSPF, acidize and swab test. If new perforations are not productive, we propose to drill out part of open hole section. Perforate the open hole section, acidize and swab test in order to evaluate water shut off of old producing interval. (All of above work will be in the Devonian).

18. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
