If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

We request your approval to convert this now shut in well to a water disposal well so the produced water from the other two wells can be injected into the Queen and Penrose sands. This procedure was approved by the New Mexico Oil Conservation Commission Order No. R-5287.

Run 2" plastic lined tubing with packer to be set at 4000 feet. Fill annulus with inert water and have a vacuum pressure gauge on the back side to show possible communication. The water will go into the old pay on a vacuum and no pumping equipment will be needed. No new surface requirements will be needed as the tank battery is on the pad for this well and the old flow line will be used as water line.
