DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above described well is intended to be drilled with rotary tools, from surface to an estimated total depth of 14,200' testing the Devonian formation.

CASING PROGRAM

- Surface-- Set 13-3/8" AT 850' with cement circulated.
- Intermediate -- Set 9-5/8" at 7,000' with 200 sacks of cement across the shoe and cement circulated to the surface from the two stage tool set at 2600' to protect the salt section.
- Production -- Set 7", 32#, S-95 through the production. Cement to be determined by logs.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
